Python
HTML,CSS,AND JS
JAVA
C++

PROFILE

Hello! I'm Amanuel Neby, a passionate Information Technology student at Debre Birhan University. I have a strong interest in software development, problem-solving, and emerging technologies. Over the past few years, I've worked with multiple programming languages and frameworks, building projects that enhance my skills and contribute to real-world solutions.

PROJECTS

Hospital Management System (Python, SQLite3, Tkinter)

I've developed practical, real-world software solutions, including:

- A Hospital Management System built with Python (Tkinter for GUI) and SQLite3, designed to streamline patient records, appointments, and staff management at Debre Birhan University. This project improved data accessibility and reduced manual administrative tasks.

E-Commerce Website (PHP, MySQL)

- An E-Commerce Platform developed using PHP and MySQL, featuring user authentication, product catalogs, and shopping cart functionality. This system demonstrated my ability to create secure, dynamic web applications with database integration.

EDUCATION

Bachelor of science of information technology

debre birhan universty

GPA: 3.5 / 4.0
